

Ahmed Mohamed Mostafa

Senior Wireless Network Engineer

AIC2

CWNE # 490

What is your level of industry experience?

I started working as a Wireless Engineer back in 2010 and since then, I have worked with many companies handling the designing and implementation of Wireless networks.

Where did you receive your training/education?

It was all done in a self-study manner, with CWNP and Cisco. I also have the Aruba official Instructor training.

When did you first become interested in wireless?

I first became interested back in 2010 when I started working as a Wireless Engineer.

What certifications do you currently hold?

Along with the CWNE, I have AASX, CCNP (Cisco Certified Network Professional), ACMP (Aruba Certified Mobility Professional), ACCP (Aruba Certified ClearPass Professional), ACSP (Aruba Certified Switching Professional).

Why did you choose the CWNE path?

I wanted to know the concept of Wi-Fi and how it works. I want to apply all that knowledge while working with vendor implementation.

How long have you been involved in the CWNP certification process?

I first started back in 2017 and got my first CWNP certification on October 2020.

What would you say to anyone considering a CWNE designation?

if you are involved in WLAN projects, the knowledge and the participation will help you a lot during your journey to CWNE.

What value will your CWNE provide to you, your clients, and/or your company?

CWNE helps me gain and build trust with customers the right way with WLAN, ranging from the design process to implementation and validation.

To whom would you recommend the CWNE program?

I would definitely recommend the CWNE program to every Wireless Engineer who wants to learn the complete concept and is interested in documenting their experience with Vendor Neutral Certifications.
